

F Prime Framework Installation

Setup Ubuntu in Virtual Machine

NOTE: If you are already done with installation from Step 1 to Step 4, then skip to Step 5.

1. Install Ubuntu in the local machine or virtual machine (check a configurable Ubuntu and Raspberry Pi supported version) [Click here](#)
2. Run AdditionRun and set a Shared Clipboard to "bidirectional". Follow this link: [Click here](#)
3. F Prime Framework Toolchain Compilation. Follow this link: [Click here](#)
4. F Prime Framework New Project Setup.
 - [Requirement](#)
 - [Tutorial](#)

NOTE: DO NOT forget to activate the environment

5. Understand F Prime Terminology. [Terminology](#)
6. Start F Prime Project. [Hello World](#)
7. Project Deployment. [Click here](#)
